

PRAJWAL CA

BENGALURU, KARNATAKA | 9916264621 | prajwalpraju.ca@gmail.com |
Software Engineer | Data Analyst | Machine Learning enthusiast | Ex- Mindtree Employee.

SUMMARY

Software Engineer with 1 year of experience at Mindtree specializing in Python, SQL, ETL pipelines, and optimization-based solutions. Skilled in Data Science, Machine Learning Algorithms, Computer Vision, Flask, IoT, and Power BI for Data Analytics with hands-on experience in building intelligent systems in healthcare, traffic management, predictive modeling and solving real time Problems.

EDUCATION

Bachelor of Engineering in Computer Science | Bangalore Institute of Technology | 2021.

TECHNICAL SKILLS

Programming: Python, SQL, Java, Bash (Linux), Java Scripts.

Libraries: NumPy, Pandas, Scikit-Learn, Matplotlib, OpenCV.

Web Programming: Flask Framework, Django, HTML, CSS, Jinja2, Stream lit.

Database: MySQL, SQLite.

Microsoft Tools: Excel, PowerPoint, Power BI.

Cloud: AWS- EC2 instance.

AI_TOOL: ChatGPT, Claude, Notebook LM, Make AI, Perplexity, Gamma AI, heygen AI.

EXPERIENCE

Software Engineer | Mindtree LTI | 2021-2022:

Developed Python ETL and data-processing pipelines by converting legacy Excel engineering models. Leveraged mathematical modeling, differential equations, optimization algorithms, and simulation analysis to identify optimal configurations. Automated data transformation, validation, and quality checks using Pandas; partnered with cross-functional teams to deliver scalable solutions.

INTERNSHIP | NEOSKILLS | 2025-2026:

PROJECT: AI Medical Report Analyzer | Django, Python, REST APIs, PDF Processing.

Engineered an end-to-end AI medical report analysis system capable of extracting 30+ laboratory parameters from unstructured PDF reports. Automated clinical data extraction using PDFPlumber and regex-based parsing, reducing manual report review effort. Developed RESTful APIs for reporting ingestion, medical parameter extraction, and disease risk interpretation. Built a scalable backend architecture using Django REST Framework for integrating future ML-based diagnostic models.

CAREER BREAK

Civil Services Examination Preparation (2022–2025):

Developed strong analytical reasoning, problem-solving, self-learning, and time-management skills through rigorous competitive exam preparation. Simultaneously upskilled in Python, SQL, Data Analytics, Machine Learning, and AI through self-directed projects. Built end-to-end Machine Learning and Computer Vision solutions using Scikit-learn and OpenCV.

PROJECTS

Smart Traffic Management System | YOLO, OCR, OpenCV, IoT:

Developed an intelligent traffic management system integrating YOLO-based vehicle detection, OCR-driven ANPR, and IoT-enabled traffic control. Achieved **86% model accuracy** and enabled real-time traffic density estimation, congestion analysis, and automated signal management using Computer Vision techniques.

Soil Classification and Crop suggestion | OpenCV & KNN:

Link:

Built a soil classification model using computer vision techniques, extracting HSV color and texture features from **10,000+ images**, and applying Standard Scaler and PCA. Achieved **94.7% accuracy** across **4 soil classes** and integrated predictions into a crop recommendation workflow.

Amazon Sales Analytics Dashboard | Power BI, DAX, Power Query, Excel:

Link:

Built a Power BI Business Intelligence solution leveraging DAX, Power Query, ETL, and data modeling to analyze **\$1.57M+ revenue** and **22K+ transactions**, delivering KPI monitoring,

profitability analysis, customer segmentation, geospatial insights, forecasting, and executive-level business reporting.

Hospital Management System – Python Flask, HTML5, CSS and SQLite:

Link:

Developed a full-stack **Hospital Management System** using **Python, Flask, SQLite, HTML5, CSS3, and Jinja2**, implementing **CRUD operations, data modeling, authentication, authorization, and RBAC** across 4+ relational modules. Built **dashboard development, appointment scheduling, database management, and workflow automation** functionalities, enabling efficient patient, doctor, and healthcare operations management. Designed scalable **backend development** services with transaction handling, persistent storage, application security, and real-time data processing for reliable web application performance.

CERTIFICATIONS & ACHIEVEMENTS:

- Prompt Engineering Course – House of EdTech (BE10x)
- SQL with AI – BE10x
- AI-Powered SQL – House of EdTech
- Data Visualization with Matplotlib – Udemy
- Completed 50+ SQL challenges focusing on joins, subqueries, and optimization
- Winner – Cyber Security Hackathon conducted by KSCST (2019)
- Participated in “Hand Gesture Bot using IoT” workshop conducted by Tech Club BIT

LEADERSHIP & INTERESTS:

- Leadership: Served as Working President of BIT Sports Club
- Sports: Karate Black Belt
- Hobbies: Chess, Reading, Competitive Coding, LeetCode, Hacker Rank.
- Interest: Lang Chain, vector databases, or AI automation tools.
